The consensus is determined from the latest positions of a group of hedgebots for each asset. Each group is designed to have hedgebots with different characters. Each hedgebot may have long, short or no position on the asset. Each hedgebot in the group has been backtested for a year.

Interpreting Hedgebot Signals: Color-Coded Instructions for Market Analysis

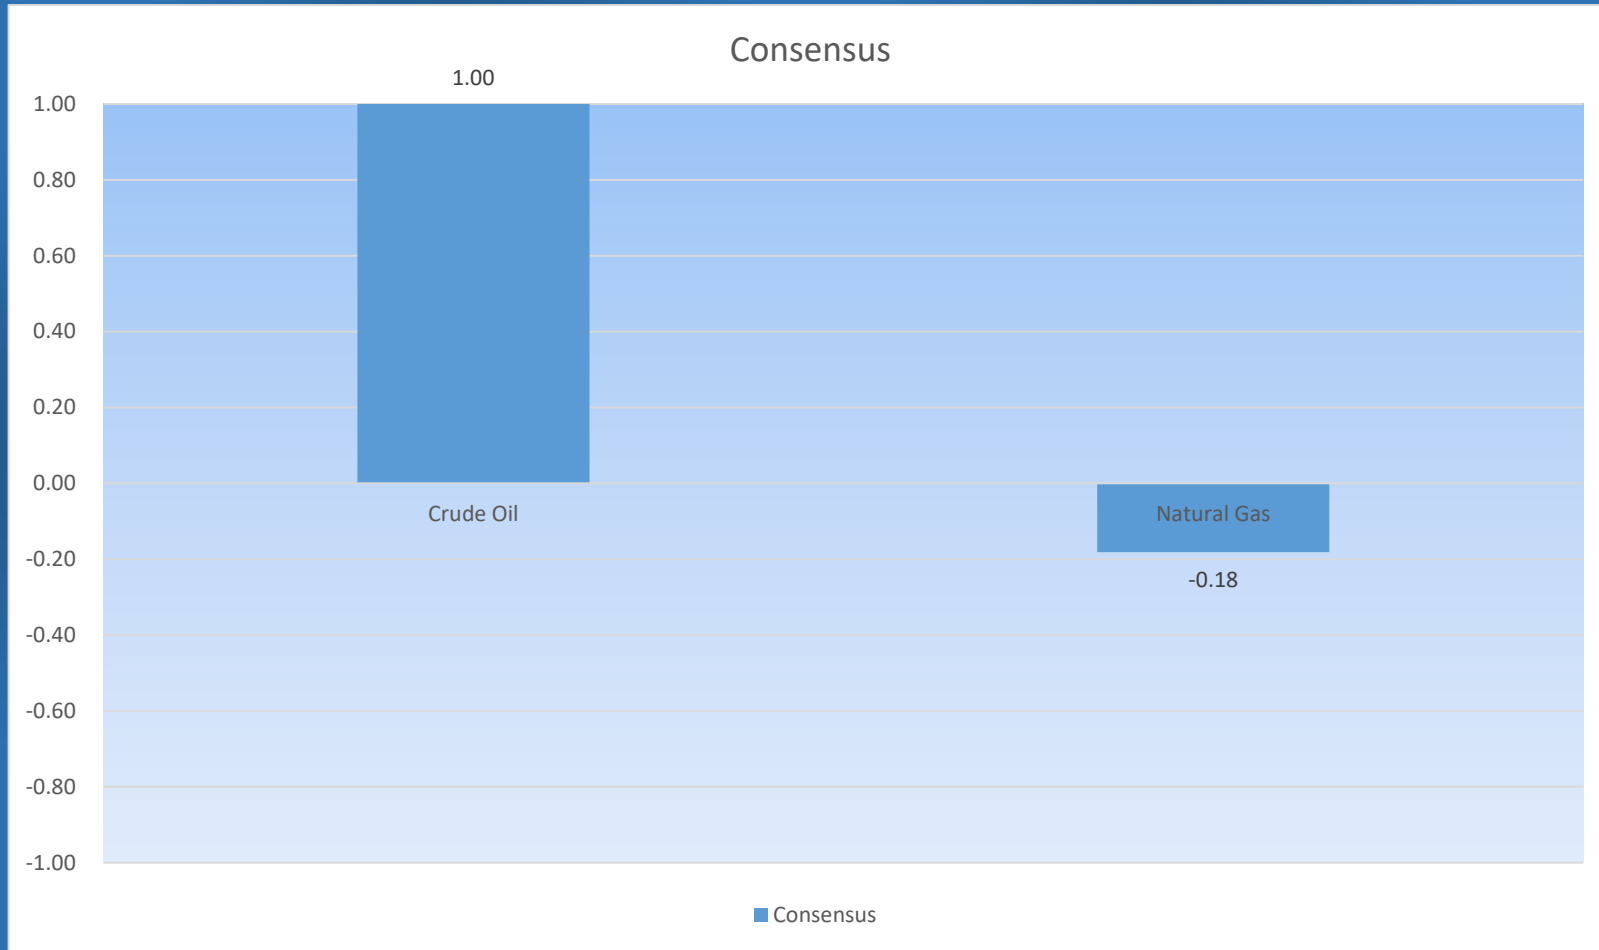

- 1) **Grey** represents the actual market
- 2) **Blue** indicates when to hedge; the closer the value is to 1, the more the hedgebots recommend hedging
- 3) **Green** is the P&L when following the hedgebots
